Feed Stuff C	Instance Specifications
	eed Wheat, Wheat
	Image- Typical Image of Wheat**
Product Description	Wheat is a type of cereal belonging to the grass family (Gramineae), the term "cereals" covering the grain fruits of cultivated grasses. When sourcing and trading organic products to ensure that the organic supply change remains compliant with the standards set out by OF&G.
Specification*	 Moisture ~12.8% Protein ~12-13% Starch ~64% Fibre ~3% Oil ~1.9-2% (*Values are not contractual)
General Use	Used as a constituent of animal feed.
Packaging &	Bulk
Transport	
Labelling	According to EU legislation 767/2009
Storage	Wheat is to be stored in cool dry conditions (water content <14%). Dull looking grains can indicate excessive drying or self-heating.
Legal Demands	 The product complies with all applicable legislation. Most important elements are: Animal feed hygiene legislation: 183/2005 Regulation 2018/848 on organic production and labelling of organic products and repealing
	EC No 834/2007
	Regulation 889/2008 on organic labelling
	Directive 2002/32/EG on undesirable substances in animal feed.
	Regulation 396/2005 on maximum residue levels of pesticides in or on food or feed
	Regulation (EC) No. 183/2005 concerning animal feed hygiene
	Commission Recommendation- EC 2006/576/EC
	Where applicable The Animal Feed (Amendment) (EU Exit) Regulations Statutory
	Instruments (Scotland, England, Wales and Northern Ireland)
	Where applicable The Feed (Sampling and Analysis and Specified Undesirable substances) Regulations 2010. (SI for Scotland 354, Northern Ireland 323, Wales 2287 & England 2280)
Undesirable	The maximum determined contents for undesirable substances in feedstuff, such as established
substances	in:
	 Directive 2002/32/EG on undesirable substances in animal feed;
	GMP+FSA; Appendix 1 (Product standards, including residue standards)
	Regulation 396/2005 on maximum residue levels of pesticides in or on food or feed.
	Specific analysis and standard tolerances
Salmonella	Absent in 25g
Appearance Country of origin	Pale brown oval grain EU origin

R7-04A

Product Material Safety Data Sheet

	Health Information
Inhalation	Wheat can produce dust which may irritate/affect breathing- dust masks should be worn.
Ingestion	No known effects.
Eye Contact	Dust may cause irritation and redness.
Skin Contact	Dust can cause irritation or constituity to skin
Toxicological	Dust can cause irritation or sensitivity to skin. Contamination of the cereal grains with the ergot fungus (Claviceps purpurea)is unlikely but can
Information	occur & must not exceed 0.5% of the weight of all admissible contaminants.
Occupational	None
exposure limits	None
	Emergency first aid procedures
Ingestion	No-known effects
Eye Contact	In the event of eye contact irrigate with water for at least 15 minutes. Exposure may result in
	mild irritation. Seek medical attention if irritation continues.
Skin Contact	In certain individuals subject to Malady, dermatitis may occur and hence protective gloves may be advisable. Feed Barley is classified as non-toxic but as dust nuisance only. It is not corrosive.
Inhalation	Classed as a dust nuisance however, if breathing difficulties occur move to a well-ventilated area
	If breathing problems are still occurring, please seek medical help. – dust masks should be worn.
	Seek medical attention if required.
	Physical properties
Physical state	Solid
Appearance	Light Brown oval grain
Odour	Wheat has a slight, pleasant odour and is high susceptible to the absorption of stronger odours.
Flammability limits	Wheat has a tendency to self heat and is dusty which can cause an increased risk in spontaneous
	combustion.
Flash point	Fire & Explosion hazard
lammability	BZ 2- Catches fire briefly and extinguishes rapidly. BZ-4 Spread of a glowing fire.
Extinguishing media	Foam, dry chemical, carbon dioxide and water spray.
Explosion class	St 1
When storing wheat,	Special firefighting procedures & precautions ventilation is important. Combustible when subjected to heat. Suitable extinguishing agents are
